

## A Better Approach

CSA was founded in 2002 by a code enforcement official to establish a better approach in assessing installer qualifications.

Unlike other agencies, our assessments are available within days, provide immediate feedback, allow users to view past assessment records, and

*"Assessments can often be scheduled and taken within a week at professionally proctored test locations!"*

much more. All resulting in a positive selling point for the jurisdiction, while providing a quality photo ID card that will proudly display an individuals qualifications. Up to five qualifications can be displayed on a single card.

Ask about our third-party plan review services including life safety plans, fire protection and device spacing before the project bids, and shop drawings.

Compliance Services & Assessments, LC

## *The Best Solution in Assessing Contractor Qualifications*

### **Compliance Services and Assessments, LC**

*"Without Assessments,  
all you have are Assumptions!"*

## Why CSA

CSA has simplified the assessment process to ensure qualified installers. Using the Internet, individuals schedule themselves for the time and location of their

*"Time, cost, and AHJ needs - That is what puts CSA up front!"*

choice. They can also change the schedule up to three days before the assessment.

CSA offers assessments in fire protection related disciplines including; fire alarm and sprinkler on-site competent persons, domestic sprinkler installers, extinguisher technicians, kitchen hoods, private fire main installers, company responsible managing party, and more.

With CSA, all your installers can demonstrate qualifications!

## Installers are not Designers

CSA understands there is a significant difference between an installer and a designer. Some licensing qualifications, such as delivered by NICET\*, are developed around the expectations of a career designer in engineering technology. Which is fine, for those who want to be a career designer.

However, few installers will become career designers. CSA and many of our partnering AHJ's do not feel it is appropriate to "require" all installers to follow the same track of experience and testing as a designer. By properly assessing installers, contractors are more likely to support the AHJ in requiring standardized qualifications.

*Using certified proctors, on-line scheduling, and professional test facilities.*

## Codes Require Qualified Individuals. Do You?

Both employers and AHJ's are required by codes to ensure that installers, service technicians, and designers are qualified. Third-party testing is the most effective and least objectionable method of evaluating qualifications. Every contractor that is dedicated to quality will support third-party testing. When properly enforced by the AHJ, it is one of the most effective tools to ensuring that all contractors are being held accountable to qualified employees. Such consistency helps to level out competitive bids in a low-bid market. Help your contractors deliver the quality your community deserves. Recognize CSA qualifications!
